

**SOUTHERN ILLINOIS UNIVERSITY and
UNIVERSITIES COUNCIL ON WATER RESOURCES PRESENT**

Public Health Applications for Water Resources **By Dr. Anna Gitter**

Date: Tuesday, April 29th, 2025

Time: 12pm - 1pm central time

Location: Microsoft Teams Webinar

This virtual event is free and open to the public. Click [here](#) to reserve your spot today.

Dr. Anna Gitter is an Assistant Professor in Environmental and Occupational Health Sciences and affiliated faculty with the Center for Health Equity and the Southwest Center for Environmental and Occupational Health at UTHealth Houston School of Public Health.

Water management is an interdisciplinary field that requires expertise across diverse sectors, including policy, engineering, life sciences, and public health.

Often, when we think of water and public health, drinking water quality or wastewater management comes to mind. This presentation will highlight the critical need for why water resources management should be developed with critical attention to the relationship between public health and water. A few specific examples, including recreational water quality, wastewater-based epidemiology, and tap water avoidance, will be discussed to showcase the value of evaluating “water” topics through a public health lens.

Come join the conversation!

This webinar is sponsored by: **UCOWR** | UNIVERSITIES COUNCIL ON WATER RESOURCES
